...tion ...es and ...terface

there are a lot of other time management apps

something like a calendar that keeps track of the due dates, classes, and assignments

...ke sure ...who ...he best ...asily see

Development and Technology

if we were to make a full application, we could use html, css, javascript, react, css, azure for web services, and a database like postgresql or another sql database

Multi-platform for accessibility

Accessibility and Inclusivity

free mobile app

college students are the target audience

Business Model and Monetization

would have to use the advertisements to pay for the cloud based computing

have advertisements on the application to generate income

use the money generated from advertisements to help long term support

Offer some premium version of the app

use social media for free marketing

no coupons, rebates, or promotions, because it's free

there would be no leadership structure.

no regulatory issues

Feed... Grow... Colla...

use a link to a google form for feedback from users

partner with other universities after
